Abstracts

TDDI (Touch and Display Driver Integration) chip is an advanced technology that integrates touch controller and display driver into a single chip, which is widely used in smartphones, tablets and other mobile devices. This integrated design not only simplifies the manufacturing process and reduces the number of components, but also reduces the overall power consumption and improves the reliability and performance of the system. TDDI chip can process touch input and screen display output at the same time, making the device more responsive and the user experience smoother. The core advantage of TDDI technology lies in its high degree of integration. Traditional touch screens require separate touch IC and display driver IC, while TDDI chip eliminates the communication delay between the two through internal signal processing optimization, achieving faster and more accurate touch response.

The global Touch and Display Driver IC market size was estimated at USD 2846.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
