HMI is the abbreviation of Human Machine Interface, which is also called human-machine interface. It is a medium for interaction and information exchange. Human-machine interface is a digital device that connects industrial control equipment such as programmable controllers (PLCs), frequency converters, DC speed regulators, and instruments, uses a display screen to display, and uses input units (such as touch screens, keyboards, mice, etc.) to write working parameters or input operation commands to achieve information interaction between people and machines. This report counts the touch screen human-machine interface (HMI) market. As an indispensable functional unit of industrial automation control systems, with the increasing demand for intelligent transformation of traditional industries, the development of human-machine interface is also accelerating. The transformation and upgrading of traditional industries to intelligence, digitization and informatization is the main driving force for the growth of the human-machine interface market. The human-machine interface has a significant role in converting information forms, providing system control, and promoting human-machine communication. As the main force of information interaction in the field of automation, it can not only improve production efficiency and quality, but also enhance user experience. The downstream application of touch screen human-machine interface (HMI) is relatively wide, and it is used in various types of automated processing plants, food processing, and pharmaceutical industries. These industries have good future development prospects and will drive the development of touch screen human-machine interface (HMI) industry to a certain extent. With the introduction of concepts such as carbon neutrality and carbon peak, governments of various countries attach great importance to emissions and environmental protection issues, and various industries have also introduced relevant policies to develop low-emission products. The demand for more efficient, energy-saving and automated products will rise sharply.

The global Touch Screen HMI market size was estimated at USD 2318.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.10% during the forecast period.
