Abstracts

Touch Screen OCA optical glue is a highly transparent, pressure-sensitive adhesive film used to laminate touch panels, cover glass, and display modules. It provides optical clarity, bonding strength, bubble-free adhesion, impact resistance, and light-transmission stability for smartphones, tablets, automotive displays, wearables, and commercial touchscreens. The OCA optical glue value chain begins upstream with suppliers of acrylic monomers, silicone polymers, UV stabilizers, release liners, PET base films, and optical-grade additives; midstream, specialty chemical companies synthesize high-purity optical adhesive, coat it onto PET substrates via precision coating lines, conduct curing, lamination, slitting, anti-dust control, and optical performance testing; downstream, touch module manufacturers, display panel makers, smartphone/tablet OEMs, automotive display suppliers, and electronics assemblers use OCA films to bond cover glass, touch sensors, and display modules, ensuring high clarity, durability, and structural stability. Major OCA producers in China, Japan, Korea, and Taiwan are expanding high-precision coating lines for OLED OCA, automotive-grade thick OCA, and flexible/foldable OCA, with new plants under construction in Eastern China (Suzhou, Ningbo, Shenzhen), Vietnam, and India to support smartphone manufacturing relocation trends. Companies are developing low-modulus foldable OCA, ultra-thin OCA for under-panel cameras, and high-UV-resistant OCA for automotive and outdoor displays, while several suppliers are increasing capacity for large-format industrial OCA to meet demand from commercial kiosks and EV cockpit screens. 2024 Global Market Average Gross Profit Margin: 29%.

The global Touch Screen OCA Optical Glue market size was estimated at USD 1635.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.60% during the forecast period.
