Abstracts

The touch trigger touch probe is a highly precise measurement device used primarily in coordinate measuring machines (CMMs) and CNC machining centers to automate part inspection and tool setting processes. It operates by making physical contact with a workpiece, triggering an electrical signal upon deflection, which records the exact coordinates of the point of contact with micron-level accuracy. This technology enables efficient, repeatable, and non-destructive dimensional verification, geometric feature analysis, and alignment tasks, reducing human error and inspection time in manufacturing environments. Its applications span industries such as aerospace, automotive, medical devices, and precision engineering, where tight tolerances and quality control are critical.
