Abstracts

Toughened safety glass, also known as tempered glass, is a type of safety glass processed by controlled thermal or chemical treatments to increase its strength compared with normal glass; it is manufactured by heating float glass to approximately 700°C and then rapidly cooling it, which induces compressive stresses on the surface and tensile stresses in the core, resulting in a product that is up to five times stronger than annealed glass and, when broken, crumbles into small granular chunks instead of sharp shards, thereby reducing the likelihood of injury and making it suitable for applications where human safety is a priority, such as in automotive windows, shower doors, glass facades, and electronic device screens.

The global Toughened Safety Glass market size was estimated at USD 15981.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.15% during the forecast period.
