Abstracts

A towable concrete pump is a specialized construction equipment unit designed for the efficient transportation and placement of liquid concrete, typically mounted on a trailer chassis for mobility between job sites. These pumps utilize either piston or peristaltic mechanisms to transfer concrete through flexible or rigid pipelines over significant horizontal and vertical distances, enabling precise placement in locations inaccessible to traditional ready-mix trucks. They are differentiated from larger truck-mounted or stationary pumps by their compact size, ease of towing behind standard vehicles, and suitability for smaller-scale projects such as residential construction, agricultural applications, or repair work where maneuverability and cost-efficiency are prioritized.

The global Towable Concrete Pumps market size was estimated at USD 590.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
