## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tower Line Interactive UPS competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Tower Line-Interactive UPS is a vertically oriented uninterruptible power supply system that utilizes a line-interactive architecture with built-in Automatic Voltage Regulation (AVR). Its tower-style design resembles a desktop PC and is ideal for standalone installations in environments with limited space, such as small offices, branch IT rooms, counter terminals, or desktop systems. This UPS type stabilizes voltage fluctuations without immediately switching to battery power, providing reliable backup and power conditioning. Unlike rack-mounted UPS systems, tower units are designed for floor or desk placement, offering simplicity, ease of use, and cost-effective protection for individual or distributed loads.
