Abstracts

A tower mount whitebox server refers to a non-branded, custom-configured server system housed in a vertical tower-style chassis, typically built from commodity components such as motherboards, processors, storage drives, and memory sourced from various manufacturers rather than being sold as a pre-integrated solution by a major OEM. These servers are often assembled by system integrators or end-users seeking tailored performance, cost efficiency, or specific hardware compatibility not always offered by branded alternatives, and they are commonly deployed in small to medium-sized businesses, development environments, or specialized applications where scalability, customization, and budget control are prioritized over enterprise-level support and warranty services.
