Abstracts

Toxicology drug screening refers to the analytical process of detecting and identifying the presence of drugs, pharmaceuticals, or their metabolites in biological specimens?such as urine, blood, saliva, or hair?to assess recent or historical substance use. These tests are employed across diverse settings, including clinical diagnostics, workplace safety programs, forensic investigations, sports anti-doping, and addiction treatment monitoring. Screening methodologies commonly involve immunoassays for initial high-throughput detection, followed by confirmatory techniques like gas chromatography-mass spectrometry (GC-MS) or liquid chromatography-tandem mass spectrometry (LC-MS/MS) to ensure accuracy and specificity. The market is driven by the need to address public health concerns related to substance abuse, ensure compliance with regulatory standards, support law enforcement efforts, and mitigate risks in safety-sensitive environments.

The global Toxicology Drug Screening market size was estimated at USD 1487.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
