Report Overview

Tire Pressure Monitoring Systems (TPMS) for bicycles and e-bikes are devices designed to monitor the air pressure inside the tires in real-time. These systems enhance safety and performance by alerting the rider to any significant changes in tire pressure, which can impact handling, efficiency, and the risk of punctures. TPMS typically consist of sensors installed within the tires that transmit pressure data to a display unit or a smartphone app, allowing riders to maintain optimal tire pressure for improved ride quality and reduced wear. This technology is especially beneficial for e-bikes, where proper tire maintenance can significantly affect battery range and overall performance.
