## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on TPMS Chip competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. TPMS chip is an electronic component used in automobiles or other vehicles to monitor the pressure in tires in real time. The tire pressure monitoring system (TPMS) uses these chips to detect the air pressure of each tire and transmit data to the on-board system to ensure that the tire operates within a safe pressure range. Too low tire pressure may lead to tire wear, increase fuel consumption, and even accidents, while too high tire pressure may increase the risk of tire blowout. In 2024, global TPMS Chip production reached approximately 471.12 M Units, with an average global market price of around US\$ 4.67 per unit.

The global TPMS Chip market size was estimated at USD 2201.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global TPMS Chip market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
