## Abstracts

A track conversion system refers to a specialized mechanical assembly designed to replace the standard wheels of a vehicle with a continuous tracked undercarriage, enabling enhanced traction, flotation, and mobility over challenging or unstable terrain such as snow, mud, sand, or marshland. These systems typically include tracks, drive sprockets, idlers, suspension components, and mounting hardware, and are commonly used on utility vehicles, agricultural machinery, all-terrain vehicles (ATVs), and light trucks to improve operational capabilities in off-road or adverse conditions where conventional tires would be ineffective or unsafe. The conversion allows vehicles to distribute weight more evenly, reduce ground pressure, and navigate environments that would otherwise be inaccessible, making them valuable for industries such as agriculture, forestry, search and rescue, construction, and recreational use.

The global Track Conversion Systems market size was estimated at USD 180.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
