Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Track-mounted Screening Plant competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Track-mounted Screening Plant is a screening device with self-propelled mobility. It uses a crawler undercarriage as the walking mechanism, enabling flexible movement between different work sites. Driven by mechanisms such as vibrating motors, it generates vibrations to make the material in the screen box perform a throwing motion on the screen surface. Materials of different particle sizes are separated by grade according to the screen mesh size during the motion, with fine particles passing through the mesh and large particles being retained, thus completing the screening operation.

The global Track-mounted Screening Plant market size was estimated at USD 743.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
