Abstracts

A track power socket is a power system that comprises a track fixed to a wall or furniture and sockets that can move along the track and draw power as needed. This device uses special conductive tracks and contact technology, allowing the sockets to slide and position flexibly along the track, providing users with a more convenient and flexible way of using electricity. A track power socket adapter is a conversion device used to connect different types of electrical plugs to the track power socket. It typically has an interface on one end that matches the track power socket, allowing it to be inserted into the track socket module and obtain power. The other end has various standard electrical plug interfaces for connecting to different types of electrical equipment, enabling these devices to receive power supply through the track power socket.

The global Track Power Sockets and Adapters market size was estimated at USD 1879.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
