Abstracts

A track spring bulldozer is a heavy-duty earthmoving machine characterized by its tracked undercarriage, which provides superior traction and weight distribution over rough or soft terrain, and a large front-mounted blade (or dozer) used for pushing, excavating, and leveling materials such as soil, sand, rubble, or rock. The "spring" in its name may refer to suspension or cushioning systems in the undercarriage or blade mechanism designed to absorb shocks, reduce operator fatigue, and protect the machine's structure during intense operations, distinguishing it from rigid-frame bulldozers by offering enhanced durability and performance in demanding environments like mining, construction, quarrying, and infrastructure development.
