Report Overview

Rail car thawers facilitate the unloading or transloading of railcars in cold climates by heating loads of viscous liquids and frozen aggregate. Tank cars enduring harsh climates are prone to moisture ingress causing the load within the tank to freeze and adhere to the inner walls of the container. Rail car thawers warm the tank car and its contents in order to expedite unloading and to ensure that no material is left frozen to the tank car's inner walls. The systems may be housed in a shed or otherwise located outdoors.
