The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tracked PV Cleaning Robot competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Tracked PV Cleaning Robot production reached approximately 21,200 units with an average global market price of around US\$ 25,000 per unit, a single-line production capacity of approximately 200 units/year, and a gross profit margin of approximately 20%-40%. Tracked PV Cleaning Robot is a small photovoltaic cleaning equipment, similar to the smart car equipped with photovoltaic cleaning tools. It has autonomous navigation and intelligent cleaning functions, and is able to move flexibly on the surface of the photovoltaic panel, enabling rapid deployment and operation through a tracked walking mechanism. This kind of robot is usually made of lightweight materials, has the ability to cross obstacles, can adapt to different types and sizes of photovoltaic power plants, especially suitable for distributed photovoltaic power plant cleaning work. Its main advantages include convenient operation, a wide range of applications, can reduce the need for manual operation, improve cleaning efficiency, while reducing cleaning costs. It is expected that global demand for photovoltaic products will remain high in the next few years. According to our PV & Solar Research Center, by the end of 2022, the global cumulative installed photovoltaic power generation capacity is about 1180 GW. According to the data of China Photovoltaic Industry Association, the global newly installed photovoltaic capacity in 2022 is about 230 GW, and this number in 2023 is predicted to be 280-330 GW. According to the data of the Ministry of Industry and Information Technology, the total output value of China's photovoltaic industry exceeded 1.4 trillion yuan in 2022. From the perspective of production value, mainland China is still the global center of the PV industry. According to the International Energy Agency, China market share in all key products of the supply

chain have exceeded 80%. Among them, the production capacity of silicon wafers, solar cells, and components accounts for as high as 98%, 85% and 77%, respectively. According to the data released by the European Photovoltaic Association, 27 EU countries gained a new PV installed capacity of 41.4 GW in 2022. According to the report of the US Solar Energy Industries Association (SEIA), the US held a new PV installed capacity of less than 19 GW in 2022. But it is estimated that from 2023, the average annual growth rate of new photovoltaic installed capacity will exceed 21%. In terms of Japan, based on data from Fitch and the US Energy Information Administration (EIA), in 2022, Japan's newly installed photovoltaic capacity was 3.416 GW.

The global Tracked PV Cleaning Robot market size was estimated at USD 530.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 19.00% during the forecast period.
