Abstracts

A tracked radial stacker is a specialized bulk material handling conveyor system mounted on a crawler undercarriage, allowing for mobility and repositioning without the need for fixed infrastructure. It features a radial discharge capability, enabling the conveyor boom to pivot and stack materials in a semicircular pattern, which maximizes storage capacity and reduces the need for multiple fixed conveyors. These machines are primarily used in industries such as mining, aggregate production, and port operations to efficiently stockpile or load materials like coal, ore, sand, and gravel. Designed for high-capacity, continuous operation in rugged environments, tracked radial stackers offer flexibility in stockpile management, reduce material handling costs, and improve operational efficiency by minimizing manual intervention and rehandling.

The global Tracked Radial Stacker market size was estimated at USD 420.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
