Abstracts

A traction battery charger is a specialized electrical device designed to recharge the large-capacity batteries used in electric or hybrid industrial vehicles such as forklifts, airport ground support equipment, automated guided vehicles (AGVs), and other material handling equipment. Unlike standard consumer battery chargers, these systems are engineered to handle high voltages and currents, often incorporating advanced features like multi-stage charging (bulk, absorption, and float phases), temperature compensation, and communication protocols (e.g., CAN bus) to optimize battery life, ensure safety, and improve energy efficiency. They are critical for maintaining operational continuity in logistics, manufacturing, and warehousing sectors, where downtime due to battery issues can significantly impact productivity.

The global Traction Battery Charger market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
