Abstracts

Traction carbon brushes are specialized electrical components designed for use in electric traction motors, primarily in locomotives, trams, subway cars, and other rail transport systems, where they serve as critical conductive elements that transfer electrical current between stationary and rotating parts of the motor or generator, enabling motion through sliding contact with commutators or slip rings. These brushes are engineered to withstand high mechanical stresses, extreme temperatures, and varying electrical loads, often incorporating advanced carbon-graphite composites or metal-graphite materials to optimize conductivity, reduce wear, and minimize sparking, thereby ensuring reliable performance, operational safety, and extended service life in demanding railway and mass transit environments.
