Abstracts

Traction elevator systems are vertical transportation solutions that utilize steel ropes or belts, which pass over a drive sheave connected to an electric motor, to move the cab and counterweight in opposite directions, making them highly efficient for mid-rise to high-rise buildings due to their speed, smooth operation, and energy-saving counterbalance mechanism. These systems are distinguished by their reliance on friction and gravity for movement, offering greater travel heights and faster speeds compared to hydraulic alternatives, and are commonly employed in commercial, residential, and institutional settings where performance, reliability, and passenger capacity are prioritized.

The global Traction Elevator Systems market size was estimated at USD 4872.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
