Abstracts

An open-end index fund is a type of mutual fund or exchange-traded fund (ETF) that tracks a specific market index, such as the S&P 500 or NASDAQ-100, and is structured to allow continuous issuance and redemption of shares based on investor demand, ensuring the fund's net asset value (NAV) closely mirrors the performance of its underlying index. These funds are designed for passive investing, offering broad market exposure, diversification, and lower management fees compared to actively managed funds, as they aim to replicate index returns rather than outperform the market. Trading occurs either through traditional mutual fund transactions, settled at the end-of-day NAV, or via exchange-listed ETFs that trade intraday like stocks, providing liquidity and flexibility for investors seeking cost-efficient, transparent, and scalable investment vehicles aligned with overall market movements.

The global Trading Open End Index Fund market size was estimated at USD 8645.3 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Trading Open End Index Fund market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.

The insights provided enable readers to understand the competitive dynamics within the industry and formulate effective strategies to enhance profitability and market positioning.
