Cardiotocography (CTG), also known as Electronic Fetal Monitoring (EFM), which can monitor both the fetal heart rate and uterine contractions. This method provides a paper recording of the fetal heart rate and the uterine contractions, but prevents the mother from leaving the hospital bed and restricts general movement. A significant driver in the Traditional Cardiotocography (CTG) market is its long-standing use as a standard fetal monitoring tool during pregnancy and labor. Traditional CTG has been a valuable method for assessing fetal well-being and monitoring uterine contractions. However, a notable challenge in this market is the need for advanced technology and data interpretation. Ensuring that traditional CTG systems provide accurate and timely data while addressing potential limitations in signal quality and interpretation poses a significant challenge. Healthcare providers and manufacturers must invest in training and technological advancements to improve the accuracy and usability of traditional CTG, ensuring that it continues to play a vital role in maternal and fetal healthcare while embracing innovations in fetal monitoring techniques.

The global Traditional CTG market size was estimated at USD 370.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
