Abstracts

Traffic signal lights are electrically powered signaling devices positioned at road intersections, pedestrian crossings, and other locations to control and manage the flow of vehicles and pedestrians by displaying universally recognized colored lights—red for stop, amber for caution, and green for go—thereby enhancing road safety and reducing congestion through systematic traffic regulation. These systems often incorporate advanced technologies such as LED illumination for energy efficiency, smart sensors for adaptive timing based on real-time traffic conditions, and connectivity features for integration with broader intelligent transportation systems (ITS), including centralized traffic management platforms and emergency vehicle preemption systems to prioritize certain types of traffic when necessary.
