Report Overview

A trailed mower, also known as a tow-behind or pull-behind mower, is a piece of agricultural or landscaping equipment designed to be towed behind a tractor, ATV, or utility vehicle to cut grass, weeds, or other vegetation over large areas such as fields, pastures, golf courses, and roadside verges. Unlike ride-on or walk-behind mowers, trailed mowers are typically larger, offering wider cutting decks and higher efficiency for extensive terrain. They come in various configurations, including rotary, flail, and drum mowers, each suited for different vegetation types and terrain conditions. Their primary advantage lies in their ability to cover vast areas quickly while minimizing operator fatigue, making them a preferred choice for commercial landscaping, municipal maintenance, and large-scale farming operations. The market for trailed mowers is driven by demand from agriculture, government landscaping projects, and the growing need for efficient land maintenance in both rural and semi-urban areas.

The global Trailed Mower market size was estimated at USD 1235.92 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.78% during the forecast period.
