### Report Overview:

Ortho-nitro chlorobenzene (ONCB) is the isomeric product. It is the process of nitration of chlorobenzene in the presence of sulphuric acid and nitric acid. Its formula is  $C_6H_4ClNO_2$  and molecular weight is 157ONCB. It is used as an antecedent for other products. The production of ONCB includes two processes such as nitration of chlorobenzene and diazotizing of O-Nitroaniline. The significant rise in agricultural products is driving the market growth. In most developed and developing countries, agriculture is an important sector. The growth in the agricultural sectors produces the demand for fertilizers. This, in turn, driving the OCNB market. Moreover, major players in the rubber processing chemical manufacturing industry are focusing on expanding their operations and facilities across the world to increase their footprint worldwide. This may also increase market growth. On the other hand, the environmental hazardous effect coupled with the non-operation of production facilities on full capacity is hindering the market growth. However, increased R&D activities, new innovations, and technological capabilities to strengthen the industry may create lucrative opportunities in the market.

The Global Trailer Hook Market Size was estimated at USD 319.70 million in 2023 and is projected to reach USD 443.33 million by 2029, exhibiting a CAGR of 5.60% during the forecast period.
