Trailer Restraint System is a device used to keep a trailer stable and secure while operating on a dock. The system locks the trailer to the dock mechanically, hydraulically or electrically to prevent accidental movement that could cause cargo to fall, equipment to be damaged or personnel to be injured. The system typically consists of a locking device attached to the trailer's rear bumper (ICC bar) and a visual indicator system to alert the operator to the current locking status. Trailer Restraint Systems are widely used in logistics centers, storage facilities and distribution sites as a key tool to improve loading and unloading efficiency and reduce safety risks.

The global Trailer Restraint System market size was estimated at USD 811.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
