## Abstracts

A train section axle counter is a system used in railway signalling to detect the clear or occupied status of a section of track between two points. The system generally consists of a wheel sensor (one for each end of the section) and an evaluation unit for counting the axles of the train both into and out of the section. They are often used to replace a track circuit. Growth in railway infrastructure, increasing safety concerns, and superiority of digital axle counters are driving the growth of the global track digital axle counter market. However, dedicated digital axle counters have high upfront costs and are prone to failure, limiting market growth. Additionally, technological advancements bring new opportunities in the coming years. Railways play a vital role in the development of any country. It can transport cargo and passengers at a much lower cost and in less time. Governments across the world are investing heavily in strengthening railway infrastructure; thus driving the growth of this segment.

The global Train Section Axle Counters market size was estimated at USD 401.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
