Abstracts

Trampoline fabrics are specialized, high-strength materials designed to provide elasticity, durability, and safety for use in trampolines. Typically made from woven polypropylene or nylon, these fabrics are tightly constructed to create a surface that is both resilient and tear-resistant, ensuring long-lasting performance under repetitive stress. The material is non-stretch in itself but relies on the trampoline's springs or elastic bands to provide the bounce. Additionally, trampoline fabrics are often UV-resistant and weatherproof to withstand outdoor conditions, and they feature a smooth finish to minimize abrasions and enhance user comfort.

The global Trampoline Fabrics market size was estimated at USD 116.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
