Abstracts

Trampoline mat fabrics are specialized, high-strength materials designed to provide durability, elasticity, and resistance to wear and environmental factors. These fabrics are typically made from woven polypropylene or polyethylene, with UV-resistant coatings to withstand prolonged exposure to sunlight. They are engineered for optimal tensile strength, ensuring they can endure repeated bouncing while maintaining their shape and flexibility. The porous design allows for air flow, reducing resistance during use and enhancing performance. Trampoline mat fabrics are commonly used in recreational, athletic, and professional trampolines, combining safety, performance, and longevity.

The global Trampoline Mat Fabrics market size was estimated at USD 116.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
