Report Overview

Trans-cinnamic acid is not only used as a flavoring agent for bakery goods, confectionaries, beverages, and toothpaste but also as a precursor for esters to develop fragrances. Manufacturers extensively use trans-cinnamic acid to impart fragrance in air fresheners, soaps, and cosmetics. It is also used in mouthwash, chewing gums, and perfumes.

The latest trend gaining momentum in the market is continuous R&D to prepare indigo dye which is less hazardous to health. Presence of synthetic indigo dye has resulted in declining use of natural dye in the textile industry. However, health issues and pollution due to synthetic dye has driven the demand for natural dyes in many countries.
