Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Trans-zein competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Zeatin Riboside is a highly active and widely used natural synthetic cytokinin (CKs). It not only promotes cell division, stimulates stem bud proliferation, inhibits root formation, and prevents leaf senescence, but also activates gene expression and metabolic activity. When mature plants are in the maximum growth period, the level of natural cytokinin hormone is very high. After being recognized by a group of histidine protein kinases (HKs) responsible for signal induction, cytokinins transmit signals to the cell nucleus in the form of multiple phosphate transfers, thereby activating the expression of target genes.

The global Trans-zein market size was estimated at USD 132.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Trans-zein market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
