## Abstracts

Transesterification catalyst is a catalyst used in transesterification reaction (i.e. molecular exchange reaction between ester and alcohol), which can accelerate the breaking and recombination of ester bonds. It promotes the mutual exchange of ester groups and alcohols by reducing the activation energy of the reaction, thereby generating new ester compounds. Common transesterification catalysts include alkaline catalysts and acidic catalysts, which are widely used in the fields of biodiesel production, polymer material synthesis, etc.

The global Transesterification Catalyst market size was estimated at USD 1425.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
