Abstracts

A transformer core is typically made of a high perm material with little or no gap. Energy is transferred constantly from an AC source through the coupling of the lines of flux between the winding on the primary and the winding on the secondary. An ideal transformer provides minimum core losses and maximum power transfer, at a low cost in the least amount of space. Core materials for transformers are typically ferrites, strip wound products and, less commonly, powder cores. Global Transformer Cores key players include ABB, SIEMENS, Alstom, TBEA, TOSHIBA, etc. Global top five manufacturers hold a share over 25%. China is the largest market, with a share over 35%, followed by North America and Europe, both have a share over 40%. In terms of product, Steel Laminated Cores is the largest segment, with a share over 95%. And in terms of application, the largest application is Power Industry Transformer, followed by Consumer Electronics Transformer, etc.

The global Transformer Cores market size was estimated at USD 7625.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
