Abstracts

Insulation paper, pressboard and various components are three primary insulation materials used in transformers. They are essential for ensuring the safe and efficient operation of electrical transformers. They provide electrical insulation, mechanical support, and protection from moisture, chemicals, and thermal degradation. The energy and power sector is one of the primary drivers of the market. With the ever-increasing demand for electricity, both in developed and developing nations, there is a constant push to expand electrical grids, build new power plants, and replace old infrastructure. These activities necessitate the production and use of transformers, which require high-quality insulation materials, including transformer insulation paper, to ensure efficient operation and longevity. With the increasing global focus on renewable energy sources such as wind, solar, and hydroelectric power, new power generation plants are also being established. These plants require modern transformer technology, further propelling the demand for insulation paper. This trend is particularly evident in emerging economies, where the expansion of energy infrastructure is a key priority.

The global Transformer Insulation Paper, Pressboard and Component market size was estimated at USD 1058.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
