Abstracts

A transformer is an electrical equipment that helps in varying the voltage of the electric current. This stepping up and stepping down of the voltage is especially important when a safe amount of electric current is required to be supplied to the end users. In order to ensure continuous and safe transmission of electricity from the power generation plant to the end users, the transformers utilized for this purpose have to be monitored continuously in real time. This is achieved by installing a transformer monitoring system within a transformer housing. Requirement of a transformer monitoring system is especially important when faults and anomalies within the grid or circuit have to be detected before the complete breakdown of the transformer occurs. Global key transformer monitoring system manufacturers include GE, Hitachi ABB etc. The top 3 companies hold a share about 40%. Asia Pacific is the largest market, with a share about 40%, followed by Europe and North America with the share about 26% and 22%.

The global Transformer Monitoring System market size was estimated at USD 2413.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
