Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Transforming Growth Factor- β competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Transforming Growth Factor-beta (TGF- β) is a multifunctional cytokine, mainly including three homologous molecules: TGF- β 1, TGF- β 2 and TGF- β 3. TGF- β is widely involved in various biological processes such as cell growth, differentiation, apoptosis, immune regulation and tissue reconstruction, especially in tumor microenvironment, fibrotic diseases, autoimmune diseases and stem cell regulation. It plays a regulatory role through the Smad signaling pathway and is one of the key molecules in many signal transduction studies and targeted drug development. Recombinant human TGF- β protein is often used in in vitro cell experiments, animal models, regenerative medicine and biomaterial functional verification. Against the background of the continuous expansion of scientific research and biomedical applications, the market demand for TGF- β is steadily increasing. At present, the price of recombinant TGF- β 1 protein (such as human or mouse source) for scientific research is usually between US\$300 and US\$900/10 micrograms, and the specific price varies depending on purity, source (mammalian expression, E. coli expression) and whether it contains a label. In the next few years, with the clinical advancement of anti-TGF- β targeted drugs, the development of cutting-edge fields such as tumor immunotherapy, anti-fibrosis drug research and development, and tissue engineering, the market size of TGF- β and its signaling pathway products is expected to continue to expand and become an important part of biopharmaceuticals and precision medicine.

The global Transforming Growth Factor- β market size was estimated at USD 154.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

9.50% during the forecast period.
