## Abstracts

Transglutaminase is an enzyme that catalyzes the formation of isopeptide bonds between proteins. Its cross-linking property is widely used in various processes: to manufacture cheese and other dairy products, in meat processing, to produce edible films and to manufacture bakery products. Transglutaminase has considerable potential to improve the firmness, viscosity, elasticity and water-binding capacity of food products. At this stage, the production technology is mainly microbial fermentation method. And Ajinomoto is the first enterprises to achieve commercial production with microbial fermentation method in the end of 1980s. Global key players of Transglutaminase include Ajinomoto, Taixing Dongsheng, Yiming Biological, etc. The top three players hold a share about 76%. Asia-Pacific is the largest market, and has a share about 37%, followed by Europe and North America with share 31% and 27%, separately. In terms of product type, 100 U/g ? 200 U/g is the largest segment, accounting for a share of 51%. In terms of application, Dairy has a share about 31 percent.

The global Transglutaminase market size was estimated at USD 246.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
