## Abstracts

The transient plane source thermal conductivity meter is a thermal conductivity performance testing product manufactured through Transient Plane Heat Source Technology (TPS). It is mainly used to measure the thermal conductivity of materials. The working principle of the equipment is to use a planar probe made of thermally resistive material as a heat source and temperature sensor, and use the change in resistance to reflect the heat loss, thereby calculating the thermal conductivity of the sample. This method enables quick and accurate measurement of thermal conductivity when studying materials. This instrument can be used to test various thermal conductivity properties of different types of materials and has broad application prospects.

The global Transient Plane Source Thermal Conductivity Meter market size was estimated at USD 66.7 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
