Report Overview

Transit cards are prepaid or reloadable smart cards used for seamless payment across public transportation systems, including buses, subways, trains, and sometimes even ferries. These cards utilize contactless technology, such as RFID or NFC, allowing users to tap and pay without physical cash, enhancing convenience and reducing transaction times. Transit cards can be either closed-loop (limited to a specific transit network) or open-loop (compatible with multiple systems and sometimes even retail purchases). They often integrate fare capping, discounts for frequent travelers, and digital tracking of usage, making them a cost-effective and efficient alternative to traditional ticketing. The growing emphasis on cashless economies, urbanization, and smart city initiatives has further accelerated their adoption globally. Additionally, some transit cards are now embedded in mobile wallets or wearables, reflecting advancements in digital payment ecosystems.
