## Abstracts

Translucent Wall System is a building envelope made of high-strength and light-diffusing materials (such as polycarbonate, laminated glass or fiber-reinforced composites) to introduce natural light while ensuring thermal insulation, sound insulation and privacy protection. The system combines translucent panels with supporting frames through modular design, which can enhance the visual effect of the building while reducing energy consumption. Its unique light transmission characteristics can soften outdoor light and evenly distribute it indoors, improve the natural lighting effect of the space, and effectively reduce the need for artificial lighting, thereby improving the energy efficiency of the building.

The global Translucent Wall System market size was estimated at USD 476.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
