## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Transmitter Module competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Transmitter Module refers to RF-based wireless transmission modules used in industrial automation, IoT devices, smart meters, remote controllers, security systems, wireless sensor networks and various telemetry applications. In 2024, the global average price of industrial and IoT-grade transmitter modules is around US\$3.9 per unit, with worldwide shipments reaching approximately 1.05 billion units. Gross margins typically range from 20%?38%, driven by RF front-end complexity, PA/LNA integration, modulation schemes, certification requirements and power-efficiency optimization. The supply chain includes upstream RF chipsets, oscillators, power amplifiers, antennas, MCUs and PCB materials; midstream manufacturers perform RF circuit design, module assembly, firmware integration, testing, tuning and certification; downstream customers include IoT device makers, industrial automation companies, smart metering providers, security equipment manufacturers, home appliances, and wireless control system integrators. Growth in transmitter modules is primarily driven by the expansion of IoT sensor nodes, industrial automation upgrades, and the shift from wired to wireless systems across factories, utilities and commercial electronics. As sub-GHz and 2.4 GHz technologies evolve toward higher integration and lower power, transmitter modules increasingly replace discrete RF designs in compact devices. Long-range and low-power protocols such as LoRa, FSK and narrowband wireless continue to stimulate adoption, supporting a strong CAGR through 2031.

The global Transmitter Module market size was estimated at USD 4093.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.20%

during the forecast period.
