Abstracts

Transparent backsheet modules are a specialized variant of photovoltaic modules where the traditional opaque polymer backsheet is replaced with a transparent material, typically glass or a clear polymer, allowing light to pass through the rear of the panel. This design enables bifacial energy generation by capturing sunlight reflected from the ground or surrounding surfaces, while also facilitating applications where aesthetics, partial shading, or dual-sided illumination are priorities?such as in building-integrated photovoltaics (BIPV), agricultural settings (agrivoltaics), canopies, and noise barriers.

The global Transparent Backsheet Module market size was estimated at USD 420.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
