### Report Overview

Transparent iron oxides are multi-functional nontoxic pigments that combine a range of color shades with excellent UV absorption, transparency and weathering stability. It is possible by the blending of transparent iron oxide pigments with other pigments to achieve a range of standard wood shades. Transparent Iron Oxides have smaller particle sizes than regular Iron Oxides and are available in red and yellow. They are particularly useful to provide a light shade in formulas while keeping a natural finish on the skin. Mineral sunscreen agents like Titanium Dioxide and Zinc Oxide are known to give a chalky or bluish aspect to skin of darker tones. The addition of Transparent Iron Oxides helps create tinted sunscreens to mitigate this effect and allow a more natural look.
