Abstracts

Transparent Tracing Paper is a semi-transparent paper. It is made by dipping uncut and unbound paper into high-quality sulfuric acid for a few seconds. The acid converts part of the cellulose into starch, which has a gelatinous and impermeable property. When the treated paper is thoroughly washed and dried, the resulting product is much more durable than the original paper. Tracing paper is resistant to grease and is largely water and airtight. Global key players of transparent tracing paper include Mitsubishi Paper Mills Limited, Arjowiggins Paper Group, Suzhou Huashang Paper, Minfeng Special Paper and Wuzhou Special Paper, etc. The top 5 manufacturers hold over 20 percent. Asia Pacific is the largest market, holds a share over 40%, followed by North America and Europe, with share of 26% and 22%, separately. In terms of application, the Hand Drawn is the largest application, with a share about 33%. Market driving factors Tracing paper has the characteristics of smooth paper surface, high transparency, uniform paper quality and strong adaptability. It is widely used in drawing, painting and other industries. The tracing paper market is in a relatively stable state. Almost no other companies have entered this industry, making the product price relatively stable. Market challenges The production technology requirements of tracing paper are relatively high, which limits the number of companies entering the market and also limits the market size of tracing paper. With the electronic development of the drawing industry, the modification of electronic drawings and other functions are more convenient. Tracing paper used for drawing has been greatly impacted. With the popularization of large-format printers and copiers, the traditional functions of drawing paper (printing and copying) have been gradually replaced.

The global Transparent Tracing Paper market size was estimated at USD 2459.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
