Abstracts

Transparent zirconia blocks are high-purity, fine-grained ceramic materials composed primarily of zirconium dioxide (ZrO₂), typically stabilized with yttria to enhance optical and mechanical properties, which are manufactured through advanced powder processing and sintering techniques to achieve exceptional translucency, strength, and biocompatibility; these blocks are machinable in pre-sintered or fully sintered states and are primarily used in dental prosthetics such as crowns, bridges, and implant abutments where they provide an esthetically pleasing, metal-free alternative to traditional ceramics and metals due to their tooth-like appearance, durability, and resistance to wear and fracture.

The global Transparent Zirconia Block market size was estimated at USD 28.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
