## Abstracts

Transplant serology diagnostic is a diagnostic approach in the field of transplantation medicine. It mainly involves the detection and analysis of various serological markers in the blood of donors and recipients. These markers include, but are not limited to, human leukocyte antigens (HLA) antibodies, ABO blood - group antigens and antibodies, and other relevant immunoglobulins. By conducting such serological tests, it is possible to assess the immunological compatibility between the donor and the recipient. This information is crucial for determining the suitability of a transplant, predicting the risk of rejection, and guiding the selection of appropriate immunosuppressive therapies. Transplant serology diagnostic plays a fundamental role in ensuring the success of organ or tissue transplantation procedures.

The global Transplant Serology Diagnostic market size was estimated at USD 2448.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
