### Report Overview:

Over 50 years of studies in the field of blood-forming stem cells i.e. hematopoietic stem cells (HSC), researchers have developed significant understanding to use HSCs as a therapy. At present, no type of stem cell, adult, embryonic or fetal has attained such sufficient status. Hematopoietic stem cell transplantation (HSCT) is now routinely used for treating patients with malignant and non-malignant disorders of blood and the immune system.
