Abstracts

Transport boat epoxy resin is a specialized two-component thermosetting polymer system formulated for marine applications, primarily used in boat building, repair, and maintenance due to its excellent adhesion, water resistance, mechanical strength, and durability in harsh aquatic environments. It typically consists of a resin base and a hardener that, when mixed, undergo a chemical reaction to form a rigid, waterproof, and chemically resistant material ideal for tasks such as fiberglass lamination, hull sealing, wood encapsulation, and composite bonding. Key characteristics include low viscosity for easy application, high tensile and compressive strength to withstand structural stresses, resistance to osmosis and blistering, and compatibility with various substrates like wood, fiberglass, and metals, making it indispensable for ensuring the longevity and safety of watercraft.

The global Transport Boat Epoxy Resin market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
