Abstracts

Transthyretin found in serum and cerebrospinal fluid of body is one of the transport protein carrying thyroxine and retinol-binding proteins. Transthyretin destabilization can take place due to inherited mutations or ageing. Transthyretin stabilizers prevent destabilization of protein and amyloidosis progression. A transthyretin (TTR) stabilizer is a type of medication or compound that is used in the treatment of transthyretin amyloidosis (ATTR), a rare genetic disorder characterized by the deposition of abnormal TTR protein in various organs and tissues. TTR stabilizers work by binding to and stabilizing the TTR protein, preventing it from misfolding and forming amyloid fibrils. By stabilizing the TTR protein, these medications aim to slow down or halt the progression of the disease and potentially alleviate symptoms. The global transthyretin stabilizer market refers to the market for medications and compounds used in the treatment of transthyretin amyloidosis (ATTR) by stabilizing the transthyretin (TTR) protein. This market encompasses various drugs that have been developed or under development as TTR stabilizers. Currently, there are several TTR stabilizers that have gained regulatory approval or are in advanced stages of clinical development. The market is primarily driven by the rising prevalence of ATTR, increasing awareness of the disease, and the need for effective treatment options. One of the key drugs in the market is tafamidis, which is approved in several countries for the treatment of ATTR polyneuropathy. Tafamidis has shown to stabilize TTR and slow disease progression in clinical trials. Other drugs such as diflunisal, AG10, inotersen, and patisiran are also being investigated and have shown promising results in clinical studies. The market is expected to witness significant growth as more research is conducted on the development of TTR stabilizers and as regulatory approvals are obtained for these drugs in different regions. Additionally, the ongoing efforts to increase disease awareness among healthcare professionals and patients are likely to contribute to the market growth. Key players in the global transthyretin stabilizer market include

pharmaceutical companies such as Pfizer Inc., Alnylam Pharmaceuticals, Inc., Eidos Therapeutics, and Ionis Pharmaceuticals Inc., among others. These companies invest in research and development activities to develop new TTR stabilizers and expand their product portfolios. Geographically, North America and Europe are leading regions in the market, primarily due to the higher prevalence of ATTR and the presence of established healthcare infrastructure. However, as awareness and diagnosis of ATTR improve in other regions such as Asia Pacific and Latin America, these regions are likely to exhibit significant growth opportunities. In conclusion, the global transthyretin stabilizer market is expected to grow as more effective treatments are developed and approved for ATTR. The market is driven by the increasing prevalence of the disease and the need for therapies that can stabilize the TTR protein and slow disease progression.

The global Transthyretin Stabilizer market size was estimated at USD 1590.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
